EDUCATION

University of California, Davis

B.S. in Computational Cognitive Science, Minor in Computer Science

Davis, California

Expected May 2027

- **Relevant Coursework:** Data Structures & Algorithms, Java, C++, Assembly Language

EXPERIENCE

Aseva

Software & Administrative Intern

Santa Barbara, California

May 2025 – September 2025

- Supported stakeholder research and documentation efforts by managing CRM data and producing structured reports, improving information accessibility for the team by an estimated 20%.
- Coordinated workflow documentation and internal communications across 3+ concurrent projects, developing insight deliverables that informed project decisions and reduced overhead by roughly 15%.
- Conducted desk research to evaluate and onboard 2–3 digital tools, synthesizing findings into actionable recommendations that saved the team 3+ hours per week.

Apple

Specialist

Santa Barbara, California

August 2024 – Present

- Conducted 20+ daily user need assessments by listening, probing, and adapting communication style to uncover pain points, consistently earning positive satisfaction feedback.
- Translated complex technical concepts into clear, user-centered guidance for diverse customers, improving first-use confidence and reducing repeat support requests.
- Documented recurring user challenges and behavioral patterns across customer interactions, surfacing insights that informed team-level service improvements.

PROJECTS

Market Lens | *Live Demo*

April 2025

- Defined and evaluated core product features through iterative usability testing across 3+ modules, identifying user pain points and refining functionality before launch.
- Designed a user-centered insight layer that translates complex financial data into simple, actionable signals for beginner users, informed by ongoing user feedback.
- Conducted competitor evaluations and secondary desk research to benchmark product performance, synthesizing findings into feature prioritization decisions.
- Iterated on prototypes using AI-assisted tools, running multiple test cycles to validate usability improvements and ship a functional MVP within a single sprint.

Light Sculpture System | *Arduino Project*

April 2023

- Developed an interactive light sculpture in C++ on Arduino, integrating hardware and software components across coding, physics, and CAD design disciplines.
- Programmed microcontroller logic to control dynamic lighting behavior and system responsiveness, achieving smooth real-time reaction with under 50ms latency.
- Collaborated across machine shop fabrication, engineering design, and software to deliver a fully functional physical computing installation.

ACTIVITIES

Alpha Phi

Member

Davis, California

May 2025 – Present

Muslim Student Association

Leadership Member

Davis, California

May 2025 – Present

SKILLS

Programming: Java, Python, JavaScript, HTML/CSS, SQL, C++, C

Tools: Git, APIs, AI Tools (ChatGPT, LLM-based tools), Figma, Gainsight (familiar)

Research: Usability Testing, User Interviews, Desk Research, Insight Documentation, Survey Design
